

U.S. Department of State Major Information Systems

Asset	Asset Description
Accellion Kiteworks (Kiteworks)	A file transfer tool used to send and receive encrypted information and share content via secure folders for document collaboration.
Acceptance Facility System (AFS)	An application used to track facility contact information, hours of operation, training, and potential fraud cases at each facility.
Accountable Items Web (AI Web)	A system used to process the distribution of accountable items from supply facilities to posts and domestic sites.
Adoptions Tracking Service (ATS)	A system used to track, monitor, and report on all emigration and immigration adoption cases, as mandated by the Intercountry Adoption Act of 2000 (IAA).
American Citizen Services (OCSA-ACS)	An application that tracks, monitors, and reports on services provided to U.S. citizens traveling or living abroad.
Automated Cash Register System (ACRS)	A system that is used to record consular services fees, receipts, and credit card transactions, and create daily and monthly reports.
Automated Classification and Recruitment Solution (ACRS-HR)	A system that aids in assigning classifications to position descriptions and provides integrated automated position management functionality. It is also used as a search tool for all open positions.
Azure Cloud (incl SQL database) (Azure Cloud)	An enterprise-wide suite of service offerings such as computing, storage, networking, and identity management.
Batch Router (BR)	An application that queues batch jobs received and generated from other applications and processes data files in batch sequences.
Blackboard Learning Management System (LMS)	An application that provides learning management services such as course scheduling, student registration, and record management.
Board Maintenance Application (BMA)	An application used to process and manage employee promotion lists.
Board of Examiners (BEX)	A system that tracks oral assessment testing scores for Foreign Service career professionals and provides information that assists talent management professionals with making career-altering decisions.
Budget Allocation Tracking System (BATS)	A system that assists with tracking and controlling budgets, commitments, obligations, and expenditures.
Building Information Modeling Applications (BIMApps)	A system that is used to plan, design, construct, and operate facilities.
Building Management Information System (BMIS)	An integrated workplace management system that focuses on real estate and facilities management.
Cadatacatalog	An application that feeds travel advisories to Smart Traveler, a mobile application available to users via Apple and Google app stores.

Asset	Asset Description
Candidate Tool (CT) Survey (CT Survey)	A system that enables job candidates to invite references to complete a short questionnaire on the candidates' leadership, management, interpersonal, and communication skills.
Career Tracker (Career Tracker)	An application that employees use to record early and mid-level career accomplishments.
Cascades	A document management platform used to assign, track, draft, review, clear, and archive documents.
Center for Analytics (CfA) [SBU]	An enterprise-wide data management and analytics capability that transforms data into insights that help employees make better management and foreign policy decisions.
CGFS Splunk Enterprise (CGFS-Splunk)	A tool that is used to increase cybersecurity awareness by monitoring IT resources and providing warnings regarding system events.
CGI Atlas360 GSS Support System (CGI Atlas360 GSS)	A system that outsources the complex processes that occur before and after visa interviews.
Charleston UiPath Orchestrator (UiPath Orchestrator)	A system that is used to create, test, and deploy Robotic Process Automations (RPAs).
Comp Link Connect (CLC)	An application that enables collaboration on local compensation increases before they are approved.
Comparion	A decision making tool that helps to optimize scarce capital by improving project prioritization processes and ensuring that initiatives align with strategic objectives.
Compliance and Identity Management System (CIMS)	A system that is used to apply for access to financial applications.
Conduct Suitability and Discipline Division Case Tracker (CSD)	A web-based application that helps human resources staff track employee conduct, suitability, discipline, and administrative cases.
Connect Direct Application (Connect:Direct)	A system that provides a secure method of data exchange between the Department of State and other U.S. government agencies/offices.
Consolidated Overseas Accountability Support Toolbox (COAST)	A system that is used for financial reporting, data encryption, and cashiering.
Consolidated Reconciliation System (CRS)	An application that facilitates, on a monthly cycle, the reconciliation of cash account funds.
Consular Affairs Cloud Microsoft Azure Commercial (CACMAC)	An application is used to deploy applications and services.
Consular Affairs Cloud Salesforce (CACSF)	A Salesforce implementation used by the Department.
Consular Affairs Domestic Support Suite (CADSS)	A collection of application modules that provide automated office support and tracking for financial, human, and asset resources.
Consular Consolidated Database (CCD)	A data warehouse that provides a near real-time aggregate of consular transaction activity collected domestically and at Posts worldwide.

Asset	Asset Description
Consular Data Information Transfer System (CDITS)	A communication system used to exchange data and information.
Consular Electronic Application Center (CEAC)	A full-service visa application center used to submit visa applications, make payments, schedule appointments, attach photos and documents, link to fingerprints, and check application status.
Consular Foreign & Domestic Post Infrastructure (CFDPI)	A system that assists with creating clear lines of responsibility between the various teams that develop and maintain the systems that use its infrastructure for security control implementation and risk mitigation.
Consular Launchpad for Enterprise Analytics and Reporting (CLEAR)	A portal that provides access to dashboards, reports, and analysis tools.
Consular Lookout & Support System (CLASS)	An application that checks names on visa and passport applications to identify ineligible applicants or applicants that require special action.
Consular Shared Tables (CST)	An application that is used to maintain and manage visa and passport processes.
Consular Task Force (CTF)	A system that provides assistance to American citizens overseas during a crisis and aids with notifying concerned family members, friends, and members of Congress on the status of the crisis and the whereabouts of crisis participants.
ConsularOne Application and Data	A system used to request passports, visas, and overseas services; adjudicate travel documents; and perform budget planning, execution, and contract functions.
ControlM (ControlM)	A system that automates production batch job streams for applications and operational processes.
Cost Estimating System AWS (CESAWS)	A system that supports overseas construction contracts by providing labor rates, material costs, and cost estimates.
Customer & Executive Information System (CEIS)	An IT Service Management (ITSM) system and repository that is used to add, modify, or delete infrastructure configuration items and provide and record services such as monitoring, outage reporting, data backup, and encryption.
Defense Export Control and Compliance System (DECCS)	A portal used to register entities involved with exporting, importing, manufacturing, or brokering defense articles and services on the U.S. Munitions List (USML); support commodity jurisdiction (CJ) determinations; issue requests for advisory opinions (AO); and submit, process, reference, analyze, and distribute registration and license applications.
Department of State - Office 365 (DOS-O365)	A suite of applications that provides enterprise business productivity services and software.

Asset	Asset Description
Diplomatic Clearance Application System (DCAS)	A system that supports joint efforts between the Department of State and the Department of Defense, such as military exercises, humanitarian operations, operational issues, and other administrative functions.
Diplomatic Security - Training Management System (DS-TMS)	A system that aids in managing training-related activities, such as training development and execution, budgeting, resource management, logistics and inventory, and workflows.
Diplomatic Security Federal Bureau of Investigations Connectivity (DS FBIC)	A suite of applications that collects biometric and identity data to support cybersecurity case investigation activities.
Diplomatic Security General Support System Platform-as-a-Service (DS G-PaaS)	A system that is used to organize and manage IT assets and provides a baseline for configuration and maintenance of applications.
Diversity Visa Information System (DVIS)	A system that processes Diversity Lottery applications and allocates cases based on cut-off numbers. The system allows users to record beneficiary data, duplicates, and fraudulent applications.
Document Authentication Review Tracking System (CA-DARTS)	A system that authenticates documents by issuing an authentication certificate certifying that the document adheres to international laws.
Document Imaging System (DIS)	A web-based document management system with that is used to index, store, search for, and retrieve documents.
DOS Email Systems (Email)	A system that is used to send Sensitive But Unclassified (SBU) emails between Department of State employees and cleared contractors.
DoS SharePoint Services - Internet (DoSSS - I)	A portal used to enhance employee collaboration across business processes via aggregation, organization, and search capabilities, and to deliver relevant content to employees, partners, and customers.
DOSCareers Foreign Service Mobile App (FSC Mobile App)	A recruitment tool that is used to increase awareness about domestic and Foreign Service career opportunities.
DriveCam (DriveCam)	A tool that is used to improve driver behavior and reduce injuries and fatalities related to operating motor vehicles.
DS Daily-C	A system that is used to edit and publish intelligence articles related to threats and security incidents.
DS-1552 Leave Data	A web-based application that automates the "Leave Data - Departure for Post" form.
DS-1707	An application used to report leave, travel, and consultation status of employees transferring into new positions.
ECA Program Management and Outreach System (ECA-PMOS)	A system that supports international education and training programs involved with the exchange of persons between the United States and other countries. Users track and manage the life cycle of programs supporting public diplomacy goals, which includes planning, solicitations, proposals, grants, funding, projects, itineraries, participants, results, and outreach to exchange alumni.

Asset	Asset Description
Electronic Consular Report of Birth Abroad	A web-based solution that enables customers to submit, process, access, and share information regarding overseas births.
Electronic Diversity Visa (eDV)	A web-based application used to submit information electronically for possible selection via lottery for the Diversity Visa program.
Electronic FS Bidding Process (FSBID)	A system that is used to publish available assignment lists and to bid, collect bids, and select bidders on open assignments.
Electronic Medical Records System (EMED)	A system that provides patient healthcare records such as medical evaluations and hospitalizations, medical clearance decisions, medical record release actions, and immunization history.
Electronic Model Lease (eML)	An application used to manage leases for residential, offices, structures, lands, and functional properties at Posts.
Electronic Official Personnel File (eOPF)	An application that enables employees to access their official personnel folders.
Electronic Passport Application Form Internet Website (2DB)	An application that is used to apply for a passport or report a lost or stolen passport.
Electronic Visa Application Form (EVAF)	An online visa application form that once complete is printed with a 2D barcode containing the applicants data that the Post scans during the data entry process.
ELMO	An application that collects and reports poll monitoring data during overseas elections.
Enterprise Application Integration Services (EAIS)	A framework for sharing enterprise data that integrates applications, data, and processes and leverages cloud technologies to extend the capabilities of existing applications.
Enterprise Appointment Management System (EAMS)	A tool that allows Immigrant Visa (IV) applicants to schedule appointments based on the Post's calendar availability.
Enterprise Architecture Resource Planning System (EARP)	A resource planning system that tracks official positions, new hires, attrition/retention trends, and training.
Enterprise Payment Service (EPS)	A system that collects fees from consumers for using application services.
Entrance on Duty (EOD)	An application that enables electronic completion, submittal, and review of appointee onboarding paperwork.
eRecords Management System (eRecords)	An archiving system that stores all e-mails and attachments in a repository, allowing for searching, retrieval, and viewing when necessary.
eRetirement (eRetirement)	A system that is used to electronically submit retirement requests and generate Retirement Annuity Estimates.

Asset	Asset Description
Evacuation Management System (EMS)	A system that is used to track and manage the departure of evacuees and assist with contacting evacuee family members.
Executive Agency Personnel Support (EAPS)	A system that is used to review, validate, audit, and manage individual agencies' overseas personnel, assignment, and position data.
Express Route Bandwidth (Express Route Bandwidth)	A service that aids in managing network connections and in improving network security, reliability, and speed.
Facilities Applications (FACApps)	A system that is used to gather and display environmental data from Posts around the world on topics such as building materials and asbestos management.
Family Member Employment Report (FAMER)	A tool that is used to collect and report on Eligible Family Member (EFM) employment information from Posts around the world, such as positions internal and external to the mission, work permits, and the employment atmosphere.
File Folder System (FOLDER)	An application that stores and tracks information on employee folders logged in and out of the office.
Foreign Affairs Network (FAN)	A portfolio of cloud-based services that support the rapid deployment of the digital productivity tools that enable a mobile and global workforce.
Foreign Affairs Personnel Register (FAPR)	An application that provides biographic information on domestic and foreign personnel.
Foreign Assistance Coordination and Tracking System Information (FACTS Info)	A system that supports budgeting and performance reporting for foreign assistance funding.
Foreign Service Officer Test (FSOT)	A system that is used during the Foreign Service Officer (FSO) recruiting process to administer the Foreign Service Officer Test (FSOT).
Gateway to State (GTS)	A tool accessible via the USA Jobs site that is used to apply to Department of State Civil Service and Foreign Service jobs.
GDIT Yatri GSS Support System	A system that outsources the complex processes that occur before and after visa interviews.
General Service Request (HR GSR)	A system used to track all domestic goods and services requests.
Gift Registry	An application used to enter and report gifts into an official gift registry.
Global Employment Management System (GEMS)	A human resource management information system that provides comprehensive employment data for all direct-hire employees.

Asset	Asset Description
Global Financial Management System (GFMS)	A financial system of record used for maintaining the budget for goods and services, tracking vendor payments, validating data, and recording, clearing, and closing ledger and journal entries.
Global Foreign Affairs Compensation System (GFACS)	A system used to process employee payroll and annuity pay domestically and abroad.
Global Health Enterprise System (GHES)	A system of record for patient medical data.
Global Maintenance Management System (GMMS)	A system that supports facilities maintenance activities by improving the management of shop resources, warranties, and work order processes, and tracking hazardous materials.
Government Retirement and Benefits (GRB)	A system that is used to assemble and review retirement packages.
Grievance, Appeals and Disciplinary Actions Tracking System (GADTRK)	A system that tracks Civil Service and Foreign Service employee grievances, appeals, and disciplinary actions.
Haver Analytics Data Link Express (HA DLX)	A system that is used to provide market analysis and support risk management decisions.
Holocaust Deportation Claims Tracking System (HDCTS)	A system that tracks the processing of claims under the claims program established by the U.S.-France Agreement for Deportation Claims.
HR Grievance (HRG)	An application that tracks grievance cases for Foreign Service and Civil Service employees.
HR Kofax	An application that provides high-speed scanning capabilities for Official Personnel File (OPF) documents.
HR System Access Request (HR SAR)	A system that automates application access requests and the application approval process.
Human Resources Network (HRnet)	An online portal that provides access to career networking functions, such as enrolling in mailing lists, completing employee profiles, viewing employment opportunities, and receiving information about the Standby Response Corps.
Human Resources On Line (HRONLINE)	The primary intranet portal that provides employee access to self-service applications with functions such as creating profiles, bidding for jobs, and applying for student loans. It is also the point of entry for human resource specialists to access corporate business solutions.
ILMS AV Maintenance Mobile Application	An application that allows viewing and completing work orders for armored vehicles via a mobile device.
ILMS Driver	An application that enables viewing, editing, reassigning and dispatching trip tickets remotely via a Department-issued mobile device.

Asset	Asset Description
ILMS Expendables	An application that streamlines stocking process functions by providing them on a mobile device, including picking, delivery, express issue, return requests, and signing for receipt.
Immigrant Visa Allocation Management System (IVAMS)	A system that receives immigrant visa authorization requests and controls immigrant visa number allocation per rules specified in the Immigration and Nationality Act.
Immigrant Visa Information System (IVIS)	A system that is used to prioritize and process immigrant visa petitions, record petitioner and beneficiary data, and correspond with beneficiaries.
Immigrant Visa Overseas (IVO)	A system used for recording and maintaining visa petition cases and completing visa adjudication. This system handles the final processing of Immigrant Visas and Diversity Immigrant Visas.
Independent Namecheck System (INK)	A system used to conduct namecheck queries on foreigners applying for a visa.
INR/AO Collection on FAN	A system that enables collaboration with contractors to identify and assess potential participants in intelligence analysis exchanges.
Integrated Biometric System (IBS)	A facial-recognition matching service that supports issuing visas to foreign nationals and passports to U.S. citizens.
Integrated Budget Intelligence System (IBIS)	A holistic solution that addresses the budgeting needs for Congress, the Office of Management and Budget, and the Department of State from a business process and software perspective.
Integrated Logistics Management System (ILMS)	An integrated system that improves operations in supply chain functions such as purchasing, procurement, warehousing, transportation, property management, and personal effects.
Integrated Personnel Management System (IPMS)	A software suite for human resource professionals comprised of four major components: Global Employment Management Systems (GEMS), HR Online, Post Personnel System (PS), and the HR Knowledge Center (KC).
Integrated Security and Suitability System (IS3)	A system that improves the timeliness of processing security clearances and communicating with applicants and hiring authorities.
International Currency Exchange (ICE)	A system that supports financial management and compensation lines of business by containing the official exchange rate of currencies.
International Parental Child Abduction System (IPCA)	A system that tracks all information regarding child abduction cases, such as documents, correspondence, and legal proceedings.

Asset	Asset Description
IRC/Approva	A system that automates system security-related tasks, such as separation of duties, security account management, and account recertification.
IRM Intelligent Application Service (IIAS)	A system that utilizes artificial intelligence to provide responses to common queries without the need for a human support agent.
Jefferson PAS	A component of the HROnline portal that is used to track and manage Title and Rank; Foreign Service, Consular, and Presidential Commissions; and Presidential Appointments.
Joint Financial Management System (JFMS)	A financial management system that manages annual appropriations and provides critical accounting, budgeting program operation, and reporting functions.
Knowledge Center (KC)	A consolidated repository of human resource information used for reporting.
Local Compensation Questionnaire (LCQ)	An application that is used to electronically complete, submit, and approve the annual country compensation questionnaire.
Management Information System (MIS)	A system that is used for generating reports on agencies' productivity and passport issuance workload.
Manager Support Unit Trend Tracker (MSU)	An application that is used to track trends in information provided by managers on employee conduct and performance.
MED Secure Messaging Portal (MED-SMP)	A portal that securely transmits emails containing confidential patient health information between applicants, employees, medical providers, and other government agencies.
Medical Capabilities Information Database (MCI)	A database that contains information on the medical capabilities of Post Health Units (HUs), medical staff credentials, and contact information.
MEDLink	A database server that is used to import data from human resource systems into electronic medical records.
MeterNet 2.0	A platform that collects, integrates, and disseminates water, gas, heating, and cooling meters for government-owned and residential properties.
Mission Classification (MClass)	A system that compares jobs to determine grading and pay structure.
Monster Government Solutions Data Processor for Extensible Markup Language Application (MDP)	An online service that automates human resource management and recruitment activities.
Museum Website for the Diplomatic Reception Rooms (DRR)	A website that provides visitors with information about the Diplomatic Reception Rooms and links to donate and sign up for a tour and other educational programs.

Asset	Asset Description
My Global Health (MGH)	An application that enables patients to view medical records, exchange messages with medical providers, and upload documents.
MyApps	A platform that provides various automated services such as processing work orders, booking conference rooms, and other utilities.
myGrants	A system that is used to monitor and issue federal assistance to award recipients.
myServices	A centralized platform for customers and service providers used for submitting, fielding, and managing service requests, and tracking operational health.
National Security Decision Directive (NSDD38)	An application that enables an external U.S. Government agency (USG) or non-government agency (NGO) to request the establishment of a position at Post. The Department provides workspace and a variety of services to individuals at Posts who work for USGs or NGOs. NSDD38 documents this relationship.
Non-Immigrant Visa System (OCSA-NIV)	A system that automates and streamlines processing of non-immigrant visa applications, records officers' decisions, distributes refusal and issuance information to the Consular Lookout and Support System (CLASS), and tracks visa inquiries received from government agencies and Congress.
OBO Data Lake	A centralized data repository that is used to support the development of dashboards.
OBO EnergyCAP (OECAP)	A software tool that meets federally-mandated reporting requirements and provides, via a memo messaging system, actions that need to be taken to resolve utility billing and energy management related issues.
OBO Geospatial Information System (OBO GIS)	A system designed to capture, store, manipulate, analyze, manage, and present spatial or geographic data.
OBO Real Property Application (OBO RPA)	An application that provides Posts with the ability to manage all aspects of its real property holdings in an automated environment.
OBO Smart Buildings Solutions (OBOSS)	A system that enables remote facility monitoring, analytics, control, and management reporting.
Office of Casualty Assistance Tracking System (OCATS)	A platform that is used during a crisis, such as a terrorist attack or mass casualty incident, to track calls related to casualties, and offer ongoing support to victims and their family members.
Online Auction (OA)	A reporting tool used at auctions to validate winners and payments at the time of pickup. The reports shows auction winners, items sold, and sold amounts.

Asset	Asset Description
Online Passport Renewal (OPR)	A system that enables U.S. citizens to apply for passport renewals.
Online Passport Status Service (OPSS)	A website that enables passport applicants to check their passport application status.
OnVUE	A system that supports the scheduling, registration, administration, and scoring of the Foreign Service Officer Test (FSOT).
Organizational Chart (OrgChart)	An application that graphically displays a dynamic version of the Department's organizational chart based on personnel/position data.
Over the Counter Channel Application (OTCnet)	An application that enables federal agencies to integrate check capture and deposit reporting activities and converts paper checks into electronic debits to the check writer's account.
Overseas Buildings Operation Link (OBOLINK)	A system used to store, share, manage, and control access to documents.
Overseas Personnel System (OPS)	A system used to manage overseas positions and staffing information for locally employed (LE) staff and American employees assigned abroad.
Overseas Security Advisory Council (OSAC)	A website that enables Overseas Security Advisory Council (OSAC) members, the Department, the Diplomatic Security Bureau, other government agencies, and the private sector to access and exchange vital security-related information.
PAE Fusion GSS Support System	A general support system (GSS) that outsources the complex processes before and after an interview with a consular officer. Support services include call center operation, webpages in foreign languages, fee collection services, appointment setting systems document delivery tracking, auditability, oversight, reporting, and data archiving.
Passport Data Interchange Transfer System (PDITS)	A system that provides project management support to critical passport systems and serves as the system of record for passport issuance and post-issuance record modifications.
Passport Information Electronic Records System Internet Website (PIERS)	A web portal that provides access to all passport data.
Passport Lookout Tracking System (PLOTS)	A system that tracks passport fraud and the issuance of lookouts.
Passport Records Imaging Systems Management (PRISM)	A system that is used to scan, archive, and retrieve passport-related images and documents.
Payroll Audit Tracking Program for Payroll Users (Payroll Audit Tracking)	A system used to record, update, and report on Payroll Audit Tracking.
PCS Travel Voucher (PCS TV)	A system used to file Permanent Change of Station (PCS)-related travel vouchers so that requests can be processed without rekeying information.

Asset	Asset Description
PD Tools	A tool that integrates public diplomacy information such as audience analysis, strategic planning, activity tracking, and reporting capabilities.
PEPFAR Events and Meetings (PEPFAREM)	A list that can be sorted by technical expertise and country affiliation into groups to determine attendees of the U.S. President's Emergency Plan for Aids Relief (PEPFAR) meetings and conferences.
Permanent Change of Station Travel Processing (PCSTRAVEL)	A system used to prepare Post Assignment travel orders for Foreign Service personnel.
Personnel Accounting Integrated Reporting System (PAIRS)	A system that generates reports used to determine the whereabouts of Outside the Continental United States (OCONUS) Chief of Mission (COM) personnel who have been evacuated due to a crisis.
Personnel Reporting and Statistics (PRAS)	A system that provides a complete list of all Foreign Service and Civil Service employees and all domestic and overseas U.S. Federal government full-time equivalent (FTE) positions.
Phone Book (Phone Book)	An application that allows users to review, validate, audit, and continuously manage and update individual contact information for overseas personnel.
Post Position Management (PPM)	A system that supports overseas facilities management by tracking current and forecasted positions to determine space requirements.
Pre IVO Technology (PIVOT)	A system that enables paperless pre-processing of Immigrant Visa (IV) applications and includes functions such as IV case creation, IV package review, and support/inquiries.
Predictive Analytics (PA)	A platform used by data scientists to build, train, and deploy predictive models of non-immigrant visa applicants overstaying their visas.
Presidential Appointments Tracking System (PATS)	A system that tracks and manages Presidential appointments.
Primavera P6	A software system used for project planning and managing that intelligently scales according to project roles, functions, and skill levels, and adapts to project complexity.
PRM RPC AWS GovCloud Instance	A system that supports the global case management of U.S. refugees, providing greater flexibility, connectivity, and accountability.
ProjNet (PROJNET)	A system that enables users to exchange information regarding facility acquisitions.
Proposed Itinerary (TMTWO)	A system that enables employees to electronically initiate, view, and submit proposed travel itineraries.
Purchase Card Management and Reporting System (PMARS)	A software application used to perform Purchase Card-related administrative tasks and manage the Purchase Card program.

Asset	Asset Description
Qualifications Evaluation Panel (QEP)	An application used to evaluate and provide a rating on Foreign Service candidates' electronic files, which contain information such as test scores, narratives, and essays.
Recruitment, Examination, and Employment Tracking Application (REETA)	A system used to track Foreign Service job candidates, interns, and students, through the various stages of the recruitment process.
Refugee Processing Center General Support System (RPC-GSS)	A computing and network infrastructure that supports refugee admissions processing applications and office support systems such as e-mail, phone, and fax.
Refugee Processing Center START (START)	A system that is used to manage U.S. refugee admissions cases.
Regional Financial Management System (RFMS)	A global accounting and payment system used for funds management and processing obligations and vouchers.
Regional Security Office Local Vetting (RESOLVE)	A tool used to collect, track, and manage information from the background investigations of staff who receive security certifications.
Resume Builder (RB)	A tool that enables Foreign Service employees to build and update resumes to reflect career progression and other personal changes in circumstance.
RFMS Year-End (RYE)	A tool used to plan and schedule annual financial closing activities.
RightSizing (RightSizing)	An application that is used to determine current and projected staffing needs and align staffing with strategic goals.
Risk Analysis Management (RAM)	A system that is used to vet key employees of organizations, entities, or individuals, who apply to the Department of State for contracts, grants, or other funding.
RM/FM Database (RM/FM)	A database that supports building operations by providing accounting, budgeting, and financial management services.
Safety and Accountability For Everyone (SAFE)	An enterprise system used to collect employee and employee family member contact information and send mass notifications during emergencies.
Safety Health and Environmental Management (SHEM) Risk Management System (SRMS)	A system that allows users at Post to report incidents and accidents they have witnessed or were directly involved in.
Safety Health and Environmental Management Assessment Tracking System (SMARTS)	A system that tracks compliance with recent assessment visits to document and analyze mishap data and identify trends and preventative measures.
Salesforce CRM (SFCRM_DOS)	A customer relationship management application that provides contact management, event management, and email marketing functions.

Asset	Asset Description
Salesforce Enterprise (SF_DOS)	A centralized contact management database that enables staff to engage with members of the public domestically and abroad and maintain a history of those relationships.
Salesforce Knowledgebase Cloud Application (CGFS KB)	A searchable information database that enables staff to view responses to questions on various topics, such as applications and software programs, accounting, payroll, and policy.
Scorecard (Scorecard)	An application that reports each Foreign Service Officer's history of their promotion board rankings.
SearchState	An enterprise-wide, online, search service.
Secretary's Phone Book (SPB)	A teleconferencing system used to maintain contact information for foreign and domestic individuals, as well as some Department employees.
Secure HTTP Internet File Transfer System (SHIFTS)	A tool that delivers payroll, disbursing, and accounting data files for processing financial transactions.
Security Incident Management and Analysis II (SIMAS II)	An application that serves as a repository for all suspicious activity, crime, and incident reporting domestically and abroad.
Security Records Tracking System (SRTS)	A collection of specialized server components engineered specifically for use within government agency environments that support secure, accessible web applications and web services.
Service Computation Date (SCD)	An application used to calculate employee service computation dates for leave and retirement purposes.
Smart Traveler Enrollment Program (STEP)	A system used by American citizens to register overseas travel and overseas residence with the Department of State.
SmartTraveler (ST)	A mobile application for U.S. travelers that provides access to country information, travel alerts and warnings, maps, embassy locations, subscriptions to feeds, and a link to enroll in the Department's free Smart Traveler Enrollment Program (STEP).
Space Requirements Planning (SRP)	An application that aids in planning space requirements for new construction or refurbishment projects at Posts.
Specialist Board of Examiners (SBEX)	A system used to track and calculate the oral assessment testing scores for Foreign Service Specialist career professionals.
Specialist Tracking and Reporting (STAR)	An application used to prepare and fulfill online candidate paneling assessments for Foreign Service Specialists and Career Appointment/Limited Non-Career Appointments.
State Alumni Extranet Website (ALUMNI)	A networking website for participants of U.S. government-sponsored exchange programs.

Asset	Asset Description
State Messaging and Archive Retrieval Toolset (SMART)	A Microsoft Outlook-based messaging system that manages working emails, record emails, and cables. The system enables users to control the archiving and retrieval of messages by adding internal sensitivity labels to messages.
Student Loan Repayment Program (SLRP)	An application that is used to electronically submit, track, and approve student loan requests.
Tactical High Threat Operational Response (THOR)	A system used to collect and maintain employee records related to crime and non-criminal identification for the purpose of vetting existing and potentially new employees.
Talent Database for the Office of Accessibility and Accommodation (Talent Database)	A database used to manage, track, and report job candidates with severe Schedule A physical, psychiatric, or intellectual disabilities.
TalentMAP	An application used to search, curate, publish, and bid on open assignments.
Ten Print Live Scan System (TPLS)	A system used during the visa issuing process to capture, view, and verify fingerprints.
The Museum System - Cultural Heritage (TMS-CH)	An application used for collecting historically, culturally, or architecturally significant assets located on the Department of State's properties.
The Museum System (TMS)	A system designed for museums to assist with all aspects of collections management, including exhibitions, shipments, publications, outreach, and customized reporting.
The Office of Foreign Missions Information System (TOMIS)	An application that supports the accreditation and management of privileges and immunities for foreign diplomatic community members.
Tracking Responses and Inquiries for Passports (TRIP)	An application used during passport inquiries to keep track of customer calls, reference and maintain customer application history, and create emails. It also enables each user to reference a knowledge base.
Travel Document Issuance System (TDIS)	A system that ensures passport processing and issuance for domestic citizens is prompt and meets Department-established rules and regulations.
Travel Leave and Transfer (TLT)	A system used to report leave, travel, and consultation status of employees transferring to new positions.
Tririga Out of Box	A system used to manage real property.
User Manager WebSecurity (UMWS)	A single sign-on application that assigns users role-based privileges to access systems to perform tasks.
Virtual Student Federal Service (VSFS)	An application used to advertise internship opportunities to U.S. citizens who are active college students.

Asset	Asset Description
Virtual Student Foreign Service System	A system used during the student internship application process to input tasks for student applicants to complete.
Visa Request System (VRS)	A system that generates formal letters to request issuance of diplomatic or government official visas.
Voucher Tracking Application (VTA)	An application used to track and route vouchers and invoices related to building operation and maintenance.
Voyager	A system used to manage all travel involving the Secretary. Functions include providing travel information, expediting the customs clearance process, and preparing manifests and other trip-related documentation.
vTelematics	A system used to capture metrics on vehicles in the Department's fleet, such as mileage, fuel consumption, engine status, and usage patterns.
W-2 .NET (W-2 .NET)	An application that processes employee W-2 forms.
Waiver Review System (WRS)	A system that is used to process waiver requests for exchange visitors to waive the two-year foreign residency requirement in the Immigration and Nationality Act.
Web Non-Expendable Property Application (WebNEPA)	An application used to keep account for non-expendable property at embassies and consulates.
Web Time and Attendance Telecommunications (WebTATEL)	A system used to record employee time and attendance data, submit for payroll processing, and generate reports.
Windows Time and Attendance System (WINT&A)	A system used to record employee time and attendance for payroll generation and leave accounting.
Worldwide Property Accountability System (WPAS PC Version)	A system that uses scanning technology to conduct inventory collection of program property assets located domestically and overseas.
Worldwide Refugee Admissions Processing System (WRAPS)	A system used to manage and track U.S. refugee cases at the individual and aggregate level.
